

Introducing Dash RiskOps

Optimize & Automate Risk Management

Dash RiskOps provides teams with a software platform for building, monitoring, and maintaining a robust security program in the cloud.

RiskOps makes it easy for teams to implement security controls, prepare for security audits, and meet compliance goals without increasing headcount.

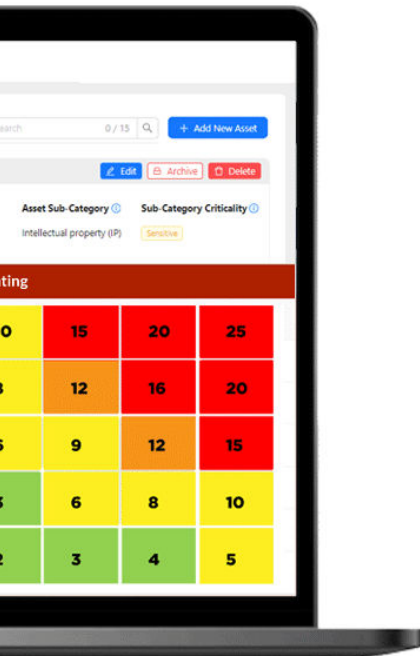

-Identify risks across your organization

-Reduce overall risk by \$5M annually

-Perform risk assessment and analysis in half the time

Effective Risk Management With Less Overhead

- ✓ **No Installation Required** – RiskOps does not require any advanced configuration or agents to be installed. Simply signup to get started.
- ✓ **Cloud & IT Infrastructure Agnostic** – Flexible workflows that adapt to your organization and support cloud, hybrid, and on-premise environments.
- ✓ **Realtime Asset Inventory & Risk Register** – Actively manage assets and organizational risk, through a live Asset Inventory and Risk Register.
- ✓ **Advanced Risk Scoring, Reports & Visibility** – RiskOps provides intelligent scoring of risks, based on likelihood, impact, asset type and organization implemented controls.

Dash RiskOps Benefits:

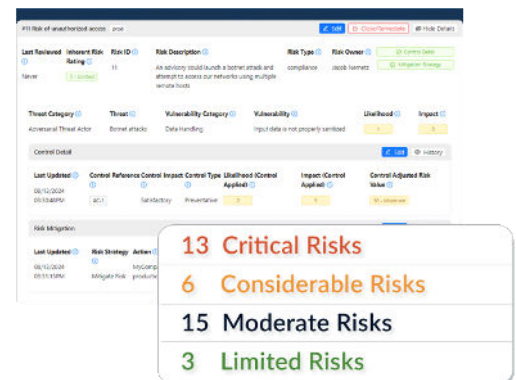

Effectively Communicate Risk To Your Board

Evaluate and present risks to your board with clarity and confidence. Digital risk management automates asset, risk analysis and assessment workflows to help you identify and reduce risks by millions annually.

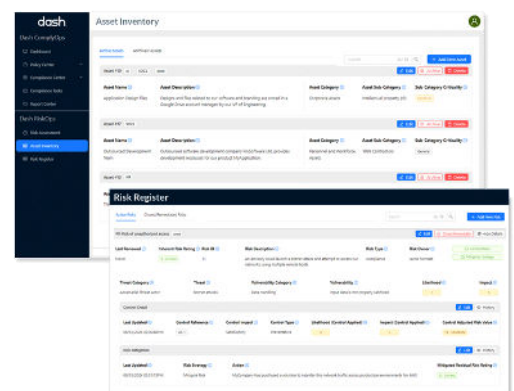

Quantify and Measure Risk

Get a comprehensive view of your organization's risk profile with Dash RiskOps. Efficiently categorize assets and risks, and generate insights and risk ratings based on classification, likelihood, impact, and internal controls.

Automate Risk Management & Reduce Risk

Dash RiskOps provides a real-time Asset Inventory and Risk Register, enabling your team to continually track, update, and manage assets and risks as your organization scales and grows.

Learn how RiskOps can help your team streamline risk assessment and automate risk management.
